

Bathroom outage household plan

START HERE: WATER IN AND WASTE OUT ARE SEPARATE CHECKS

1. Restriction, sewage backup, rising bowl or wastewater pump alarm? Stop using the toilet; seek current local or building instructions.
2. Do you know the toilet type and whether waste removal needs power? If not, confirm with the maintainer or building manager before assuming.
3. Suitable gravity toilet + working drainage + no restriction: normal use may continue with available supply. An empty tank calls for the manual-flushing guide.
4. Drainage unavailable: choose a confirmed working alternative and arrange hand hygiene and locally permitted waste handling.

WRITE DOWN YOUR ACTUAL ARRANGEMENT

Review date / time: _____ Notice checked at: _____

Toilet type / model: _____

Water source: municipal / well / building pump / not confirmed

Wastewater route: gravity / pump-dependent / septic / not confirmed

Current instruction / source: _____

Water utility / building contact: _____

Wastewater or septic maintainer: _____

Bathroom light / utility-water location: _____

Working alternative / accessibility needs: _____

Hand hygiene / waste-handling instruction: _____

Unresolved question / person checking: _____

Next notice check / restoration confirmation: _____

Do not use repeated flushes to test an unpowered pump. Keep drinking water separate.

Organization aid, not a plumbing inspection. Follow local notices and equipment instructions.
